JPFA Training No. 27-1

JPFA Strawberry Training Course

Onsite: March 4 - 5, 2027
Online Pre- & After learning: February 17- March 11, 2027

An intensive, English-based training program designed for international participants eager to learn Japan's advanced strawberry cultivation system and cultivars.
Go beyond the textbook to experience the real-world practices behind Japan's world-class strawberry production.

✨ **Confirmed Key Sites for 2027:**
HarvestX Inc., Fama-mura Strawberry Farm, Institute for Horticultural Plant Breeding, and more! (Full schedule to be announced soon)

🍓Why This Program Is Unique

Real-world learning beyond textbooks
Agriculture cannot be mastered by theory alone. Even if a textbook says "20°C is the optimal temperature", real farms rarely behave exactly as expected.

This program emphasizes:

- **Exploring diverse sites**—ranging from AI-driven robotics and high-tech facilities to highly productive, business-driven traditional greenhouses
- **Engaging directly with growers, system developers and facility managers**
- **Understanding real operational challenges** across different management scales
- **Learning how experts** make decisions in dynamic environments

🍓What Participants Will Experience

On-site facility tours
Explore diverse production sites—from highly productive, business-driven conventional greenhouses to cutting-edge facilities featuring AI, robotics, and advanced environmental control—and learn directly from growers and facility managers with expert support from JPFA.

Expert-guided learning
Specialists accompany all visits
Technical explanations based on real data and field experience
Immediate Q&A and problem-solving discussions

Peer learning
Questions from fellow participants spark new perspectives
Group discussions deepen understanding

Participation Fee
JPFA Members: JPY 200,000 per person
Non-members: JPY 300,000 per person
